

Table 2: The composite farm and average net returns in .Example

Annual net returns are determined through budgeting for each crop listed. The net returns shown in this table represent an "olympic" average of the annual net returns from 1994-2000. In an olympic average, the highest and lowest values are dropped prior to calculating the arithmetic mean. A complete listing of this table for each jurisdiction participating in the land use program is available at the Virginia Department of Taxation.

Average net returns applicable to tax-year 2002 .

	Total Acreage /1/	Composite Farm /2/	Estimated Net Returns (\$/Acre)
1. Number of Farms	312	1	----
2. Corn	2462	8	\$61.07
3. Alfalfa and mixtures	767	2	\$46.32
4. Clover and grasses	11124	36	\$11.41
5. Other hay and seeds /3/	1046	3	\$7.60
6. Wheat	534	2	\$99.29
7. Barley	422	1	\$33.67
8. Soybeans	D	----	----
9. Potatoes	D	----	----
10. Cotton	----	----	----
11. Double-cropped /4/	169 (-)	1 (-)	n.a.
12. Total Cropland Harvested	16186	51	\$24.45
13. Peanuts /5/	----	----	----
14. Tobacco /5/	324	1	\$1020.53

n.a. = not applicable

D = Withheld to avoid disclosing data for individual farms. The composite farm is based only on those crops for which acreages were reported in the 1997 Census of Agriculture.

1/ Data taken from the 1997 Census of Agriculture.

2/ Some data do not add exactly due to rounding and some categories are not listed due to disclosure rules.

3/ Net returns to other hay and seeds is assumed to be two-thirds of net returns to clover and grasses.

4/ Double-cropped acreage is subtracted from the crops listed in lines 2-10 to arrive at total cropland harvested acreage.

5/ These values are omitted from total cropland harvested because the use value of quota crops are estimated separately.

Table 2: The composite farm and average net returns in Accomack

Annual net returns are determined through budgeting for each crop listed. The net returns shown in this table represent an "olympic" average of the annual net returns from 1994-2000. D = Withheld to avoid disclosing data for individual farms. The composite farm is based only on those crops for which acreages were reported in the 1997 Census of Agriculture.

1/ Data taken from the 1997 Census of Agriculture.

2/ Some data do not add exactly due to rounding and some categories are not listed due to disclosure rules.

3/ Net returns to other hay and seeds is assumed to be two-thirds of net returns to clover and grasses.

4/ Double-cropped acreage is subtracted from the crops listed in lines 2-10 to arrive at total cropland harvested acreage.

5/ These values are omitted from total cropland harvested because the use value of quota crops are estimated separately.

Table 2: The composite farm and average net returns in *Chesterfield*

Annual net returns are determined through budgeting for each crop listed. The net returns shown in this table represent an "olympic" average of the annual net returns from 1994-2000. In an olympic average, the highest and lowest values are dropped prior to calculating the arithmetic mean. A complete listing of this table for each jurisdiction participating in the land use program is available at the Virginia Department of Taxation.

Average net returns applicable to tax-year 2002 .

D = Withheld to avoid disclosing data for individual farms. The composite farm is based only on those crops for which acreages were reported in the 1997 Census of Agriculture.

1/ Data taken from the 1997 Census of Agriculture.

2/ Some data do not add exactly due to rounding and some categories are not listed due to disclosure rules.

3/ Net returns to other hay and seeds is assumed to be two-thirds of net returns to clover and grasses.

4/ Double-cropped acreage is subtracted from the crops listed in lines 2-10 to arrive at total cropland harvested acreage.

5/ These values are omitted from total cropland harvested because the use value of quota crops are estimated separately.

Table 2: The composite farm and average net returns in *Fredericksburg*

Annual net returns are determined through budgeting for each crop listed. The net returns shown in this table represent an "olympic" average of the annual net returns from 1994-2000. In an olympic average, the highest and lowest values are dropped prior to calculating the arithmetic mean. A complete listing of this table for each jurisdiction participating in the land use program is available at the Virginia Department of Taxation.

5/ These values are omitted from total cropland harvested because the use value of quota crops are estimated separately.

Table 2: The composite farm and average net returns in Isle Of Wight

Annual net returns are determined through budgeting for each crop listed. The net returns shown in this table represent an "olympic" average of the annual net returns from 1994-2000. In an olympic average, the highest and lowest values are dropped prior to calculating the arithmetic mean. A complete listing of this table for each jurisdiction participating in the land use program is available at the Virginia Department of Taxation.

Average net returns applicable to tax-year 2002 .

	Total Acreage /1/	Composite Farm /2.	Estimated Net Returns (\$/Acre)
1. Number of Farms	190	1	----
2. Corn	11276	59	\$67.87
3. Alfalfa and mixtures	D	----	----
4. Clover and grasses	806	4	\$16.07

D = Withheld to avoid disclosing data for individual farms. The composite farm is based only on those crops for which acreages were reported in the 1997 Census of Agriculture.

1/ Data taken from the 1997 Census of Agriculture.

2/ Some data do not add exactly due to rounding and some categories are not listed due to disclosure rules.

3/ Net returns to other hay and seeds is assumed to be two-thirds of net returns to clover and grasses.

4/ Double-cropped acreage is subtracted from the crops listed in lines 2-10 to arrive at total cropland harvested acreage.

5/ These values are omitted from total cropland harvested because the use value of quota crops are estimated separately.

Table 2: The composite farm and average net returns in Newport News

Annual net returns are determined through budgeting for each crop listed. The net returns shown in this table represent an "olympic" average of the annual net returns from 1994-2000. In an olympic average, the highest and lowest values are dropped prior to calculating the arithmetic mean. A complete listing of this table for each jurisdiction participating in the land use program is available at the Virginia Department of Taxation.

Average net returns applicable to tax-year 2002 .

	Total Acreage /1/	Composite Farm /2/	Estimated Net Returns (\$/Acre)

D = Withheld to avoid disclosing data for individual farms. The composite farm is based only on those crops for which acreages were reported in the 1997 Census of Agriculture.

1/ Data taken from the 1997 Census of Agriculture.

2/ Some data do not add exactly due to rounding and some categories are not listed due to disclosure rules.

3/ Net returns to other hay and seeds is assumed to be two-thirds of net returns to clover and grasses.

4/ Double-cropped acreage is subtracted from the crops listed in lines 2-10 to arrive at total cropland harvested acreage.

5/ These values are omitted from total cropland harvested because the use value of quota crops are estimated separately.

Table 2: The composite farm and average net returns in Rappahannock

Annual net returns are determined through budgeting for each crop listed. The net returns shown in this table represent an "olympic" average of the annual net returns from 1994-2000. In an olympic average, the highest and lowest values are dropped prior to calculating the arithmetic mean. A complete listing of this table for each jurisdiction participating in the land use program is available at the Virginia Department of Taxation.

12. Total Cropland Harvested	17015	33	\$36.65
13. Peanuts /5/	----	----	----
14. Tobacco /5/	71	----	----

n.a. = not applicable

D = Withheld to avoid disclosing data for individual farms. The composite farm is based only on those crops for which acreages were reported in the 1997 Census of Agriculture.

1/ Data taken from the 1997 Census of Agriculture.

2/ Some data do not add exactly due to rounding and some categories are not listed due to disclosure rules.

3/ Net returns to other hay and seeds is assumed to be two-thirds of net returns to clover and grasses.

4/ Double-cropped acreage is subtracted from the crops listed in lines 2-10 to arrive at total cropland harvested acreage.

5/ These values are omitted from total cropland harvested because the use value of quota crops are estimated separately.

Table 2: The composite farm and average net returns in Virginia Beach

Annual net returns are determined through budgeting for each crop listed. The net returns shown in this table represent an "olympic" average of the annual net returns from 1994-2000. In an olympic average, the highest and lowest values are dropped prior to calculating the arithmetic mean. A complete listing of this table for each jurisdiction participating in the land use program is available at the Virginia Department of Taxation.

Average net returns applicable to tax-year 2002 .

	Total Acreage /1/	Composite Farm /2/	Estimated Net Returns (\$/Acre)
