

TY 2006 USE-VALUE ESTIMATES

Table 1: Estimated use value of agricultural land in Fairfax. (\$/Acre)

Land Class	Use Value Without Risk	Use Value With Risk
I	220	210
II	200	190
III	150	140
IV	120	110
Avg. I - IV	n.a.	n.a.
V	90	80
VI	70	70
VII	40	40
Avg. V - VII	n.a.	n.a.
Avg. I - VII	n.a.	n.a.
VIII	10	10

Table 2: Estimated use value of orchards in Fairfax. (\$/Acre)

Land Class	Use Value of Apple Orchard	Use Value of Other Orchard
I	140	160
II	100	120
III	50	70
IV	20	40
V	20	30
VI	20	20
VII	10	10
VIII	10	10

- **Monica Licher**, Project Associate, Department of Agricultural and Applied Economics, Virginia Tech (540) 231-4441
- **Gordon Groover**, Extension Economist, Farm Management Department of Agricultural and Applied Economics, Virginia Tech (540) 231-5850

ESTIMATED USE VALUE OF AGRICULTURAL AND HORTICULTURAL LAND IN FAIRFAX

Estimates apply to Tax Year 2006

October 17, 2005

Prepared by Beth Ann Pelletier
& Monica Licher

State Land Evaluation and Advisory Committee
Virginia Department of Taxation

USE-VALUE TAXATION IN VIRGINIA

Virginia law allows for *eligible* land in agricultural, horticultural, forest or open space use to be taxed based upon the land's value in *use* (use value) as opposed to the land's *market* value. The State Land Evaluation and Advisory Council (SLEAC) was created in 1973 with the mandate to estimate the use value of eligible land for each jurisdiction participating in the use-value taxation program. The SLEAC contracts annually with the Department of Agricultural and Applied Economics at Virginia Tech to develop an objective methodology for estimating the use value of land in *agricultural and horticultural* uses. A technical advisory committee, comprised of professionals familiar with Virginia agriculture, was established in 1998 to provide guidance on the technical aspects of developing an appropriate methodology. The members of the SLEAC have officially sanctioned the use value estimates reported in this brochure.

ROLE OF THE SLEAC ESTIMATES

Section 58.1 – 3229 of the *Code of Virginia* requires each participating jurisdictions assessment office to *consider* the SLEAC estimates when assessing the use value of eligible land. However, the local assessing office is not required to use the SLEAC

estimates verbatim. Under certain circumstances, adjustments to the SLEAC estimates may be necessary to accurately reflect local conditions that affect the use values of eligible land parcels.

TY 2006 USE-VALUE ESTIMATES

Tables 1 & 2 report the estimated use values of agricultural and horticultural land applicable to tax year 2006 in **Fairfax**. These estimates are based upon the capitalized net income that a *bona-fide* agricultural or horticultural enterprise located in the county could be expected to earn. These values are updated annually for public information. Note, the local assessing office can only make changes to assessed property values during a reassessment year.

Table 1 lists the estimated use value of land in *agricultural* use for each of the eight Soil Conservation Services land capability classifications. Because data on the land class composition of individual parcels is often unavailable, average use values have also been provided.³⁹ The average of land in classes I – IV represents the average use value of *cropland*. The average of land in classes V – VII represents the average use

³⁹ Data limitations prohibited the computation of average use values in a few counties and in most independent cities and townships.

value of *pastureland*. The average of land in classes I –VII represents the average use value of *all agricultural land*.⁴⁰ The **without risk** estimates apply to land that is *not* at risk of flooding. *The with risk estimates should only be applied to land parcels that are at risk of flooding due to poor drainage that cannot be remedied by tilling or drainage ditches.*

Table 2 lists the estimated use value of land in *orchard* use. The values are reported for both apple orchard and “other” orchard for each of the eight Soil Conservation Services land capability classifications. Other orchard refers to peach, pear, cherry, or plum production. Data limitations prohibit the computation of average use values applicable to orchards.

⁴⁰ Note class VIII land is not considered suitable for agricultural production and is therefore not included in this average.

Table 2: The composite farm and average net returns in Fairfax

Annual net returns are determined through budgeting for each crop listed. The net returns shown in this table represent an "olympic" average of the annual net returns from 1998-2004. In an olympic average, the highest and lowest values are dropped prior to calculating the arithmetic mean. A complete listing of this table for each jurisdiction participating in the land use program is available at the Virginia Department of Taxation.

Average net returns applicable to tax-year 2006 .

	Total Acreage /1/	Composite Farm /2/	Estimated Net Returns (\$/Acre)
1. Number of Farms	1516	1	----
2. Corn	6031	4	\$88.24
3. Alfalfa and mixtures	3133	2	\$0.90
4. Clover and grasses	D	----	----
5. Other hay and seeds /3/	36359	24	----
6. Wheat	2536	2	\$64.67
7. Barley	461	----	----
8. Soybeans	4984	3	\$0.64
9. Potatoes	D	----	----
10. Cotton	----	----	----
11. Double-cropped /4/	3503 (-)	2 (-)	n.a.
12. Total Cropland Harvested	50001	33	\$14.73

n.a. = not applicable

D = Withheld to avoid disclosing data for individual farms. The composite farm is based only on those crops for which acreages were reported in the 2002 Census of Agriculture.

1/ Data taken from the 2002 Census of Agriculture.

2/ Some data do not add exactly due to rounding and some categories are not listed due to disclosure rules.

3/ Net returns to other hay and seeds is assumed to be two-thirds of net returns to clover and grasses.

4/ Double-cropped acreage is subtracted from the crops listed in lines 2-10 to arrive at total cropland harvested acreage.

5/ These values are omitted from total cropland harvested because the use value of quota crops are estimated separately.
