¹ Use value taxation applies only within agricultural and forestal districts.

N.A.: Not applicable because data are transferred in, or data are not available to make estimate.

Without Risk: These estimates apply to land that is not at risk of flooding.

With Risk: These estimates apply to land with poor drainage that is at risk of flooding. Calculations are based on the assumption that a crop loss occurs once every 20 years due to flooding.

Average land values: The use value of each land class is weighted by the total acreage of agricultural land in that class, as reported by the 1967 Virginia Conservation Needs Inventory, prior to averaging.

Transfers (>): The data used for estimating the use value of agricultural land are not published for all towns and for only a few of Virginia's independent cities. When data does not exist for a town or city participating in the use value taxation program, the estimated use values from an adjacent or surrounding county are used. This process is referred to as transferring-in. Transferring-in is also used for jurisdictions with large areas of land lying in more than one physiographic region, for example coastal plain and piedmont. When a transfer-in jurisdiction has been used, it appears after an arrow (>).
