February 11, 2016

# Outline

- Brief History
- Why Use Value Assessment?
- Approaches to estimating land values
  - Income approach
  - Rental rate approach
- Discussion

# TY2016: Counties/Cities\* with use-value assessment ordinances

\* Counties/Cities are identified from annual use-value reports and may differ from actual implementation. Contact government officials in each county/city for the current use-value implementation. Not all participating cities are identified on this map.

# *Use-Value Taxation in Virginia*

- Virginia use-value taxation legislation was passed in 1972, effective for the tax year 1974.
- *Code of Virginia*, Title 58.1 §58.1-3229 through §58.1-3244), enacted in 1971, authorized use-value taxation with the stated purposes of:
  - Encouraging the **preservation** and **proper use** of such **real estate** ...source of... **agricultural, horticultural, and forest** products and **open spaces** within the reach of concentrations of population;
  - **Conserving** natural resources,... prevent **erosion**,...**safe water** supplies;

(continued...)

# ***Use-Value Taxation in Virginia***

(continued...)

- ***Preserving scenic natural beauty and open spaces;***
- ***Promoting proper land-use planning and the orderly development***
- ***Promoting a balanced economy and ameliorating pressures*** that force conversion of such real estate ....preservation for **agricultural, horticultural, forestal, or open space** purposes.
- State Land Evaluation and Advisory Council (**SLEAC**) was created in 1973 with the mandate to estimate the use value of eligible land for each jurisdiction participating in the use-value taxation program.

# *Virginia's Use-Value Taxation Program*

- Virginia law allows for the preferential taxation of **agricultural, horticultural, forest, and open space** land
- **Eligible land** in any of these categories can be assessed at the land's **value in use** (use-value) as opposed to the land's **market value**

# Eligible Land?

- Agricultural and horticultural defined by VA Department of Agriculture and Consumer Services (VDACS)
- Forest defined by Department of Forestry (DOF)
- Open space defined by Department Conservation and Recreation (DCR)
- *See State Land Evaluation and Advisory Council (SLEAC) manual for details*

# *Value in Use?*

4.6.5 Agricultural Property - The Standard on Mass Appraisal of Real Property  
International Association of Assessing Officers (IAAO 2012)

.... to use the income approach for  
agricultural land... Land rents ....

And the Code of VA allows for income and  
rental rate approaches

# Value in use, How?

## Identify components of farmland value?

<b>Market Value of 1.0 acre of farmland</b>	<b>\$7,000</b>
minus	
Proximity to amenities	\$2,000
minus	
Accessibility/distance to the city center	\$1,000
minus	
Cost of conversion or development to non Ag use	\$2,000
minus	
Growth premium – population increase	\$1,000
leaves	
Capitalized annual stream of net income (rents) from farming	<b>\$1,000</b>

# Procedures for Estimating Agricultural and Horticultural Values in Use

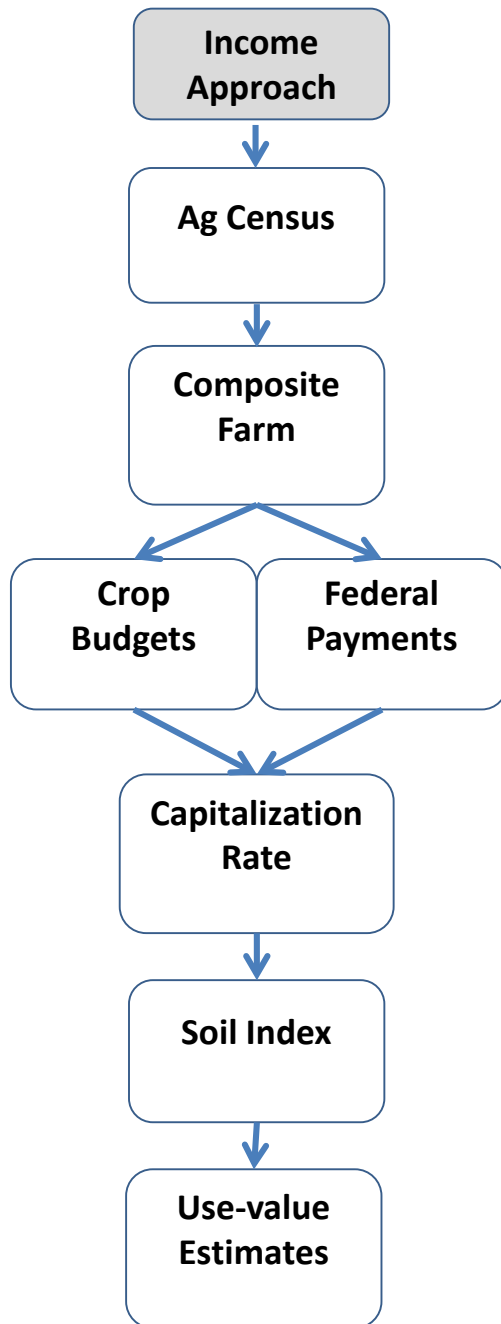

# Two Approaches

## **1. Net income Capitalized (Income Approach)**

Original model developed by Marshal (VT), Fraher, (TAX), Seward (VDACS), Poole (VT Grad Student) ~ 1974-1975.

## **2. Rental rates Capitalized (Rental Rate Approach)**

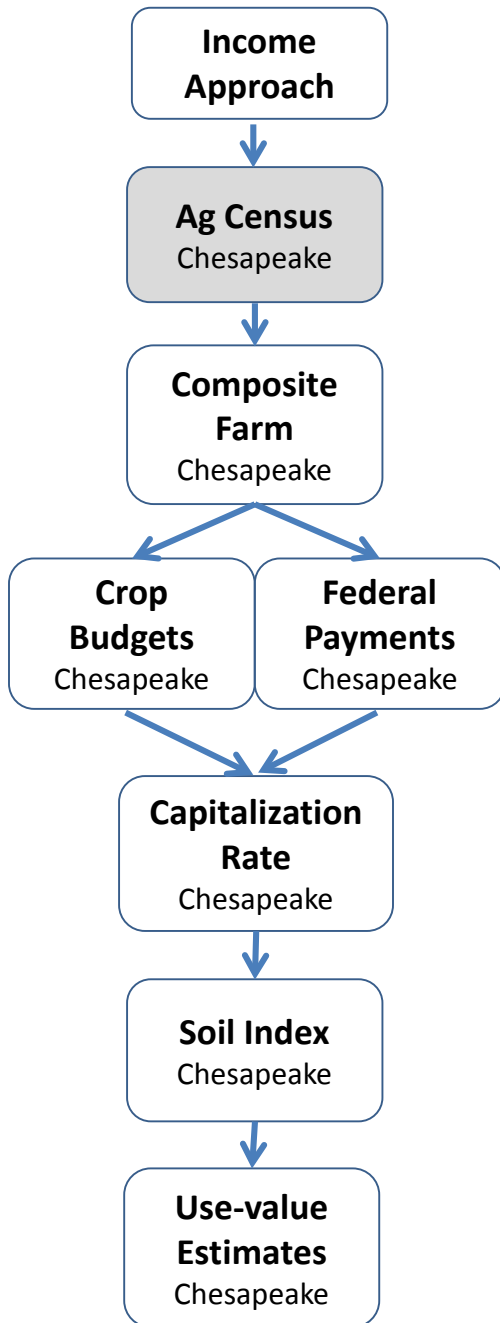

Implemented in 2010 by Groover and Bruce

## Income approach for each County

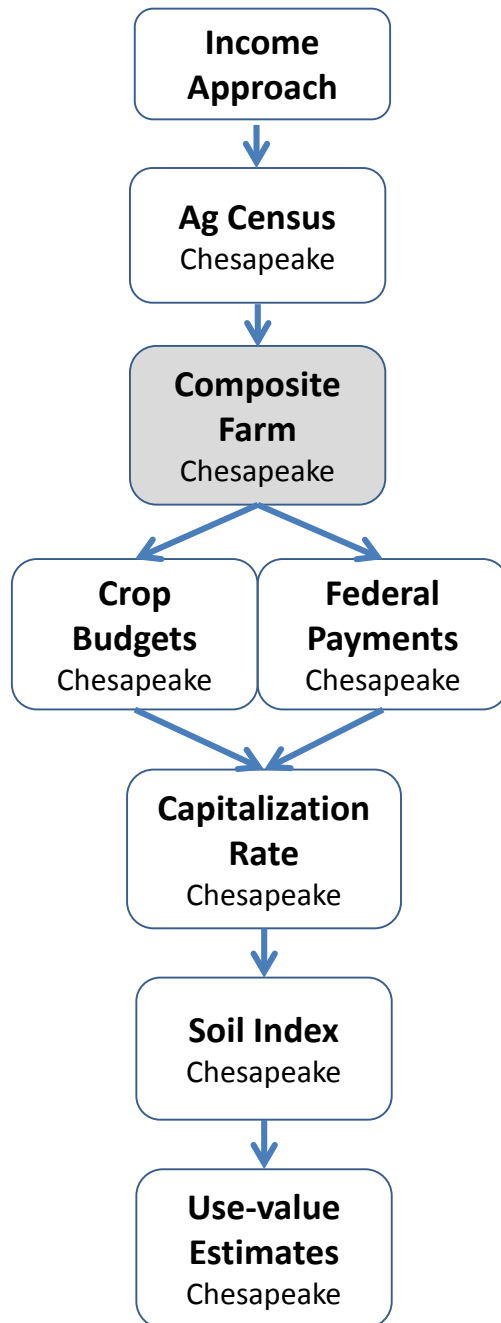

- Task: How to create an annual stream of net income that will be capitalized?
- How?
- **Build** on secondary/published data
- Use **Net Returns = Income - Costs**
- **How?** Define a representative farm (composite farm) – based on current Ag Census for each county
- **Create** an enterprise budget for each crop to yield **Net Returns (NR)**
- **Identify** crop-based federal payments
- **Define** Capitalization Rate
- **Apply** soil index
- Final Estimates

# Baseline Data - Ag Census

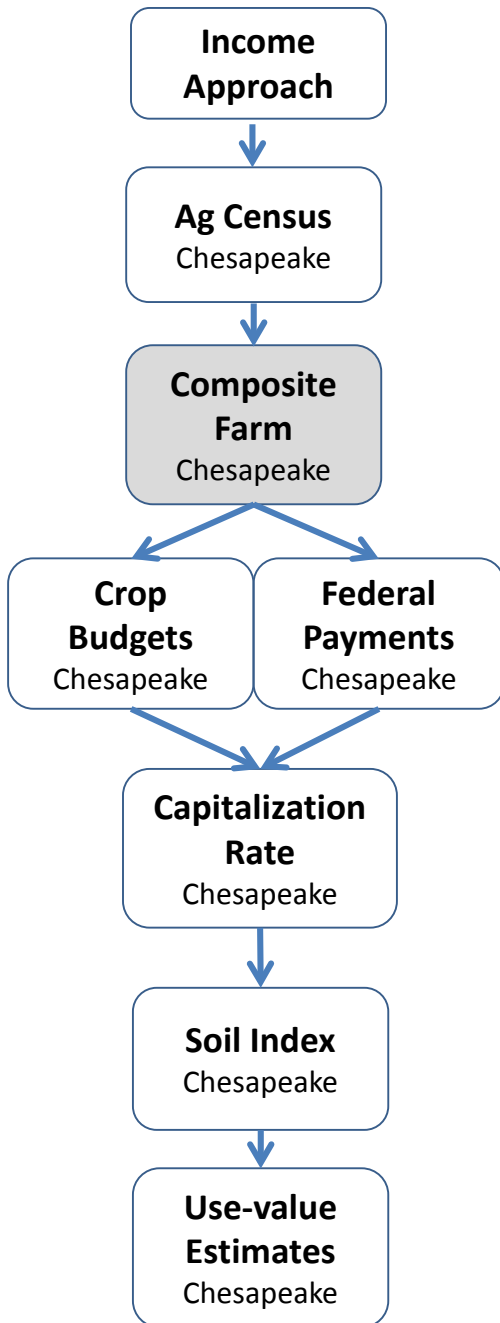

- Conducted and published by National Agricultural Statistics Service (USDA/NASS)
  - Published every 5 years
  - Current Ag Census 2012 (released in 2014)
- Use the following for each county
  - Number of **farms reported**
  - Individual crops grown e.g., corn, wheat, pasture...
  - **Acres** reported for each crop grown

# Composite Farm

- **Define - Composite Farm (CF) A.K.A. Average Farm**
  - For each reported crop: Divide acres by number of farms (Acres ÷ Farms)
  - If the values is **>0.50** ac, included in the CF
  - If **≤ 0.50** ac, excluded from CF
  - Statewide there are **16 crops** that are included in at least one county
- **Chesapeake - 2012**
  - **253** reported farms => more land owners
  - **Five** CF crops, e.g., corn+silage, soybeans, wheat, hay+haylage, and pasture

# Composite Farm - Essex

2012 Ag Census Chesapeake	
Crop	Reported Acres
Alfalfa	0
<b>Corn</b>	8,317
<b>Barley</b>	0

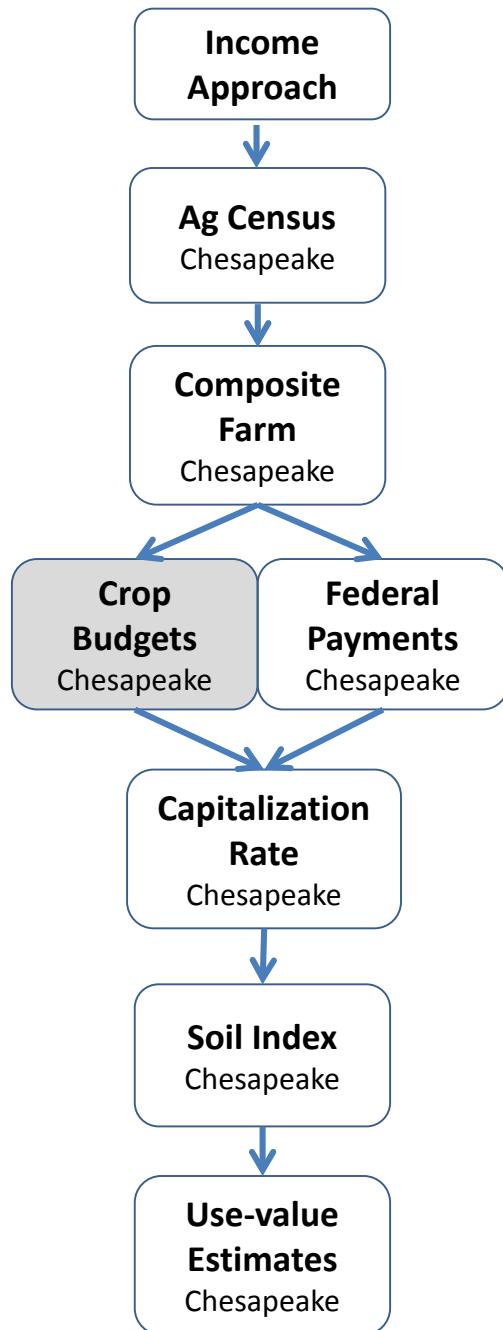

Based on 253 farms
Composite Farm Acres
<b>33</b>

Example for Corn = 8,317 ac / 253 farms = 33 acres of corn in the CF

Potatoes	1
Pumpkins	10
Snap Beans	8
<b>Soybeans</b>	25,307
Sweet Corn	25
Tobacco	0
Tomatoes	7
Watermelons	(D)
<b>Wheat</b>	7,350
<b>Double-cropped</b>	(-) 7,350
<b>Total Cropland Harvested</b>	36,794

<b>0</b>
<b>0</b>
<b>0</b>
<b>100</b>
<b>0</b>
<b>0</b>
<b>29</b>
<b>(-) 29</b>
<b>146</b>

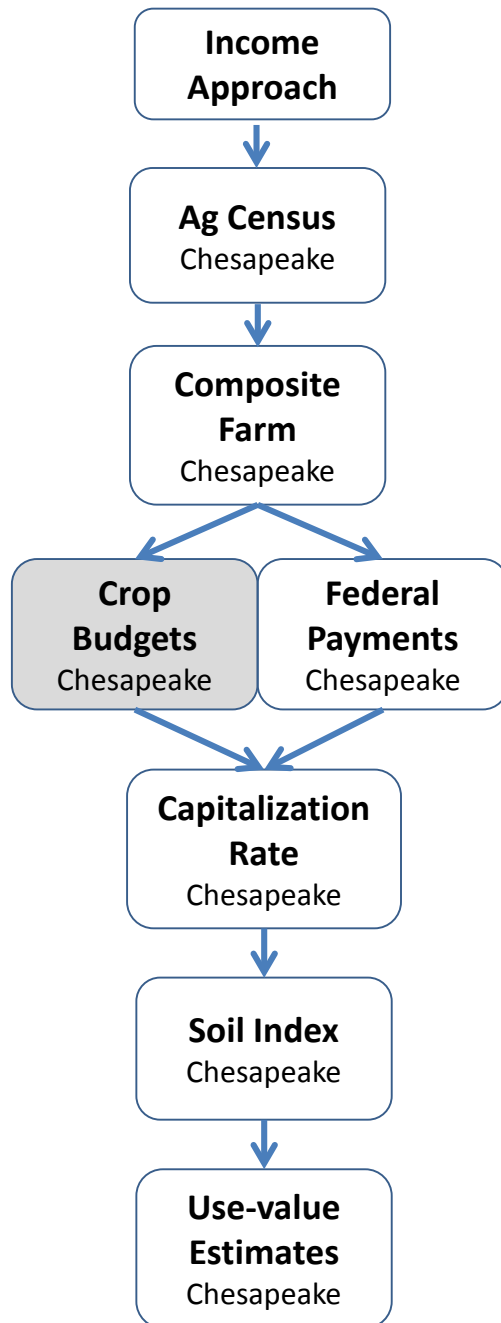

# Crop Budgets

- Created for all CF crops
- Based on VCE enterprise budget format
- Yields and Prices -> NASS
- Seeding and lime rates -> Ext recommendation
- N,P, & K inputs are based on yield-driven nutrient removal rates (International Plant Nutrition Institute)
- AgFrist -> short-term interest

# Crop Budgets

- Pesticides -> Pest Management Guidelines (PMG)
- Application costs -> custom rates
- Machinery usage and costs -> A. Society of Ag and Biological Engineers' equations
- Fuel prices -> U.S. Dept of Energy
- Crop insurance -> USDA-RMA
- Labor hours function of machinery hours
- Labor rate -> NASS
- **Note:** Budgeted NR lag 2 years, e.g., Tax Year 2016 reflects 2014 data

# Example Budget

## Chesapeake Corn Grain no-till TY2016

Corn: Yield = 168.80 bu \* Price = \$3.90/bu = \$658.32  
Net Crop Insurance = \$11.72  
Total Income = \$670

### Net Returns = Income - Costs

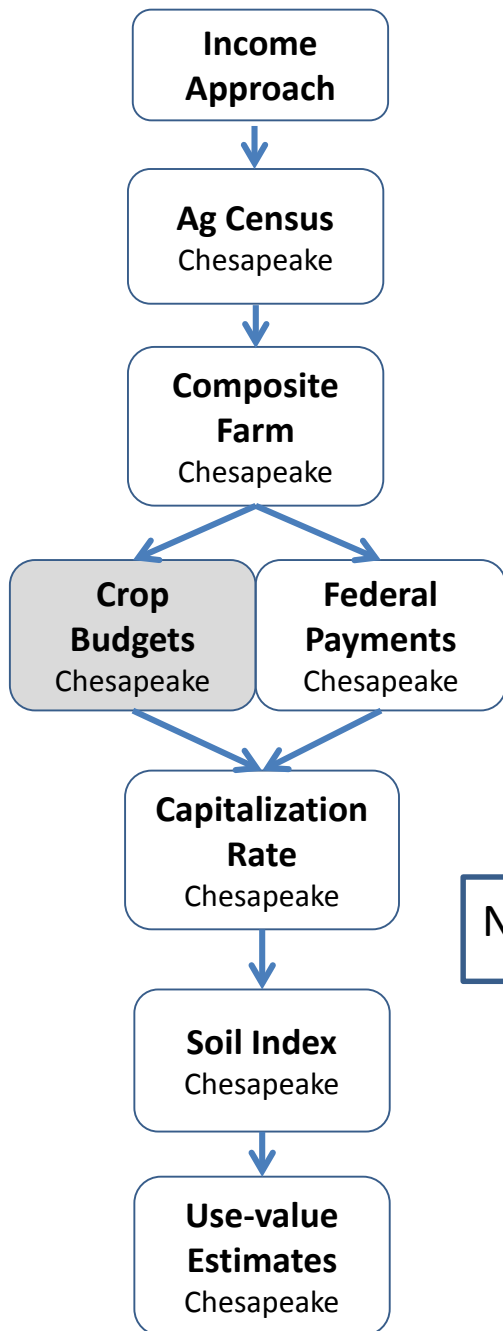

Pre-Harvest Costs: N 165 lbs  
Price = \$0.59/lbs = \$97/ac

Harvest Costs: Labor, fuel &  
oil, drying, hauling = \$105/ac

Fixed Costs: Machinery and  
Overhead = \$122/ac

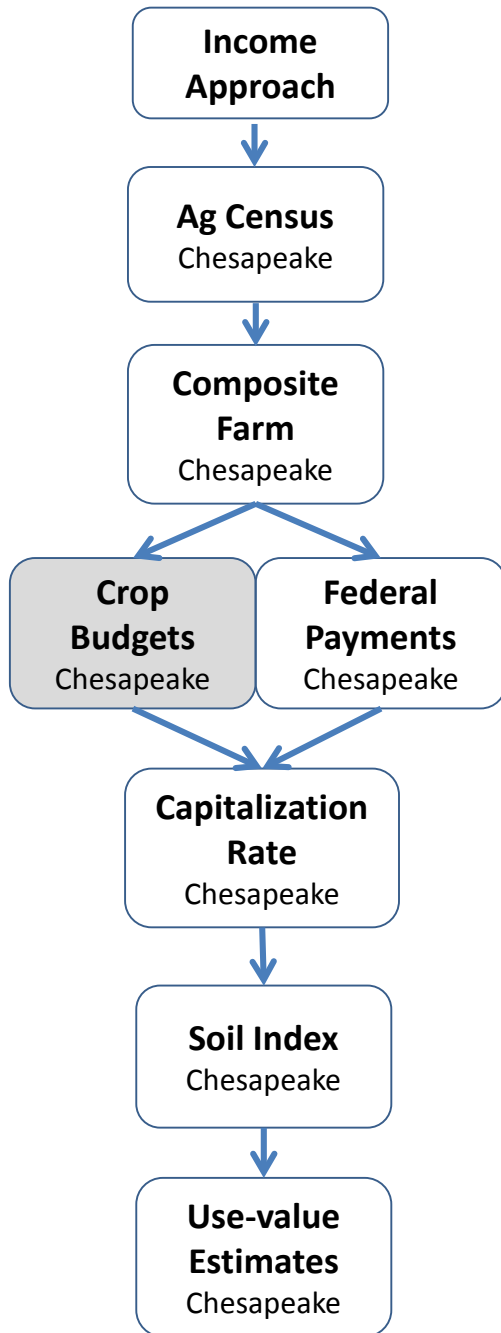

Total Costs = \$604/ac

$$\text{NR} = \$670 - \$604 = \mathbf{\$66/ac}$$

# Olympic Averaging

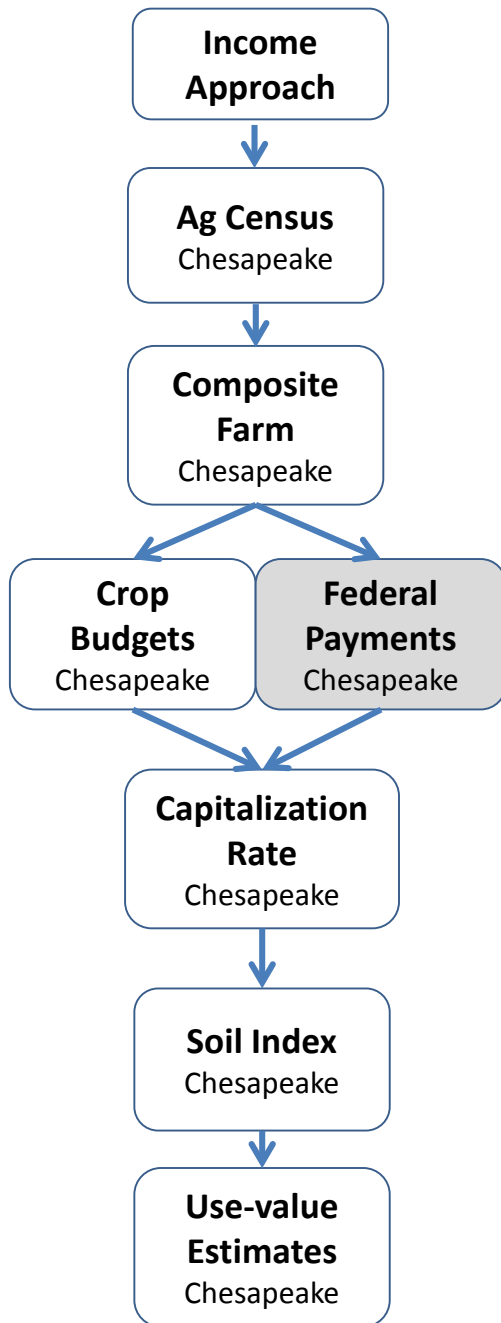

- Final NR for each CF crop requires 7 years of net returns
- 7-year Olympic Averaging drops the highest and lowest values and then straight averages the remaining 5 values
- Chesapeake Corn Grain example 2010-2016

Chesapeake: Corn	Crop Budget
TY2010	\$96.47
TY2011	(\$1.53)
TY2012	\$293.06
TY2013	\$298.48
TY2014	\$515.52
TY2015	\$98.66
TY2016	\$65.64
<b>Olympic AVG</b>	<b>\$170.46</b>

Lowest

Highest

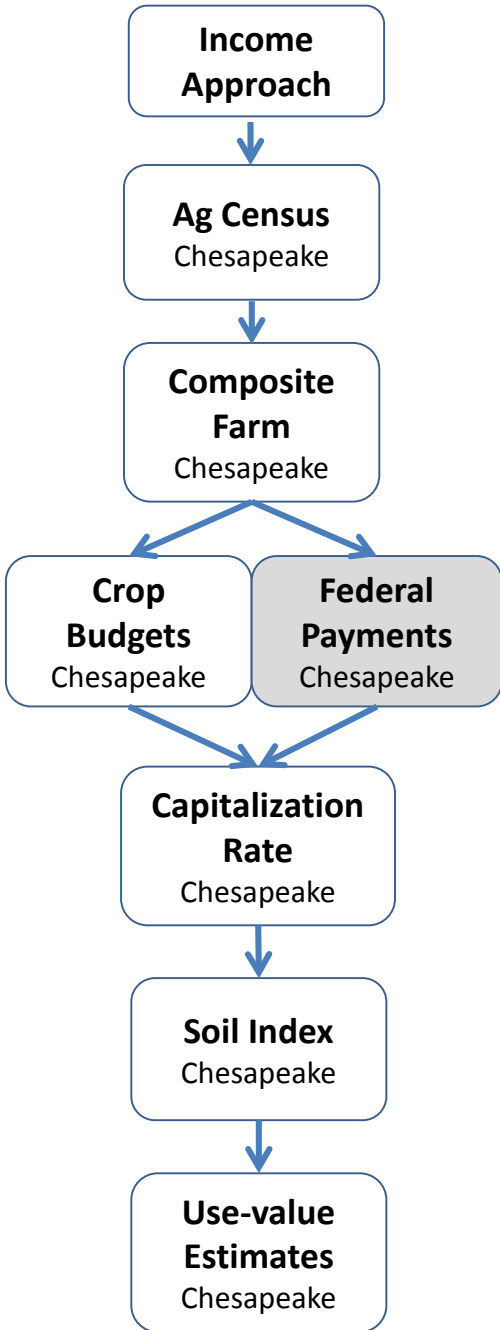

# Federal Payments

- **USDA-FSA** provides data for program crops by county
- Chesapeake receives payments for **corn, wheat, and soybeans**
- Annual payments = Payment/crop acreage
- TY2015, Chesapeake received **\$282,536 in federal payments for corn.**

$$\$282,536 / 8,317 \text{ ac} = \mathbf{\$33.97/ac}$$

# Olympic Averaging

- Chesapeake Corn Grain example 2010-2016

Chesapeake: Corn	Federal Payment	Corn Budget
TY2010	\$26.77	\$96.47
TY2011	\$11.31	(\$1.53)
TY2012	\$21.55	\$293.06
TY2013	\$27.16	\$298.48
TY2014	\$28.39	\$515.52
TY2015	\$33.97	\$98.66
TY2016	\$0.00	\$65.64
<b>Olympic AVG</b>	<b>\$23.04</b>	<b>\$170.46</b>

Lowest

Highest

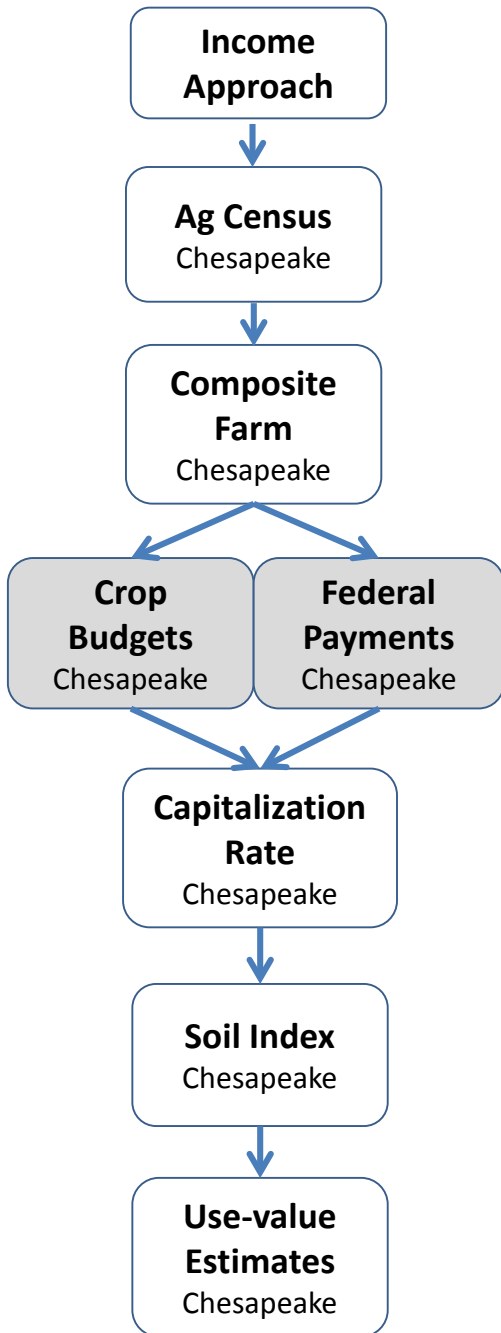

Highest

Lowest

- Final Corn Net Return for TY2016
  - Oly AVG Fed Pay + Oly AVG Budget
  - $\$23.04 + \$170.46 = \mathbf{\$193.50}$

# Final Net Returns Chesapeake County TY2016

- Composite Farm weighted NR by crop acreage

Crop	Estimated Net Return
Corn	\$193.50
Hay	\$0.00
Wheat	\$81.72
Soybeans	\$171.18
Pasture	\$15.60
<b>Final Net Return (per acre)</b>	

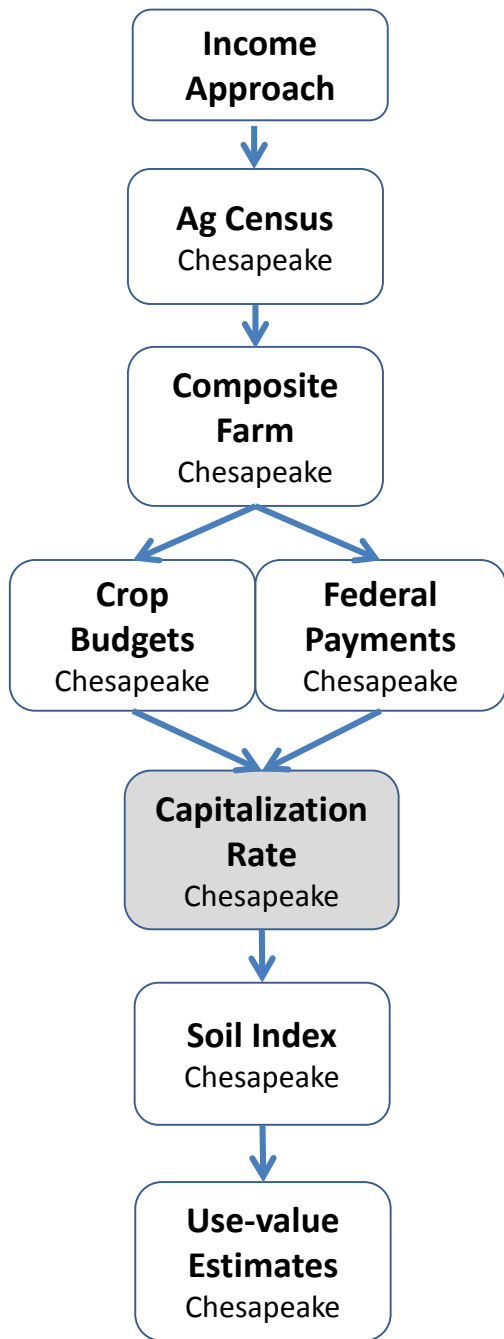

CF acres	NR weight
33	\$43.74
6	\$0.00
29	\$16.32
100	\$117.74
7	\$0.72
<b>146</b>	<b>\$178.52</b>

Reflects double-cropped wheat (29 ac)

# Capitalization Rate

## Why use Capitalization Rate?

- *Cap Rate = Net Return ÷ Value Farmland*
- *Farmland Value = NR ÷ Cap Rate*
- *\$100 per year ÷ 10% = \$1,000*
- **Cap Rate = Interest Rate + Property Tax**

Federal Land Bank long term interest rate - AgFirst (10 year average)

Effective Tax Rates for all counties - VA Department of Taxation (10 year average)

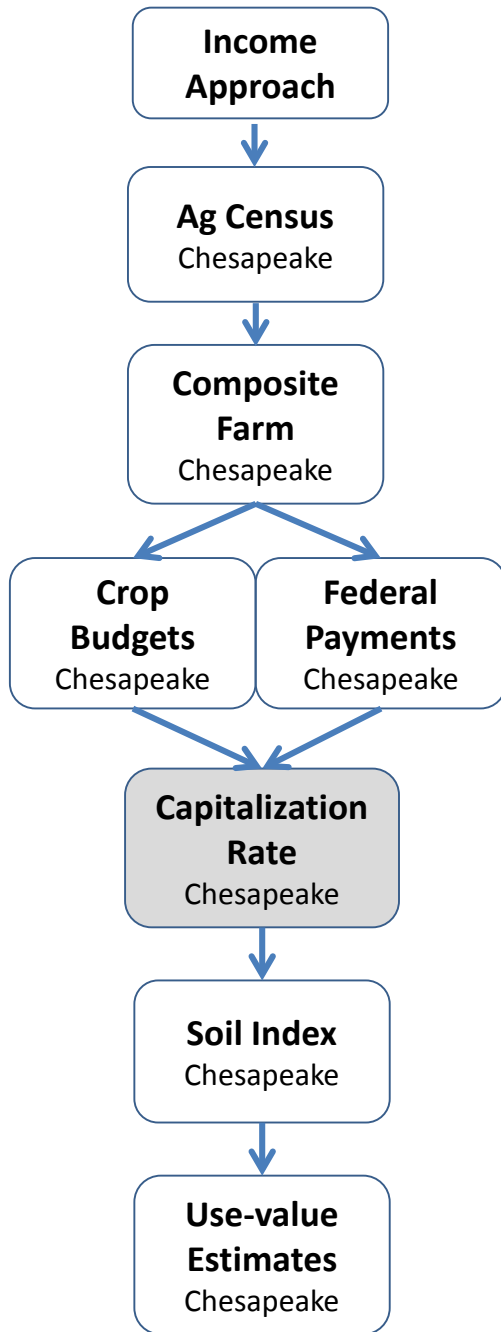

# Chesapeake TY2016

## Cap Rate Components

Interest Rate – statewide (10yr Avg)	0.0626
Property Tax – Chesapeake (10yr Avg)	0.0106
<b>Total without risk</b>	<b>0.0731</b>
Crop loss due to Flooding 5%	0.0037
<b>Total With risk</b>	<b>0.0768</b>

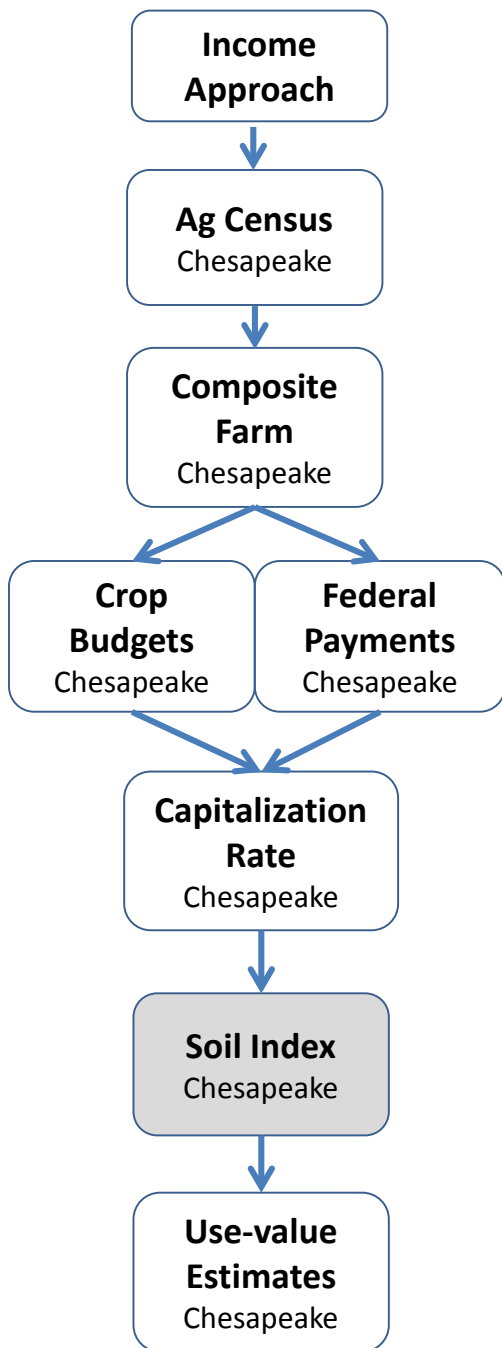

## Use Value Chesapeake TY2016

	Use Value =	Net Returns	÷	Cap Rate
Use Value without risk =	\$178.52	÷	0.0731	
Use Value without risk =	<b>\$2,440.62</b>			
Use Value with risk =	\$178.52	÷	0.0768	
Use Value with risk =	<b>\$2,324.40</b>			

# Adjustments for Soil Capabilities

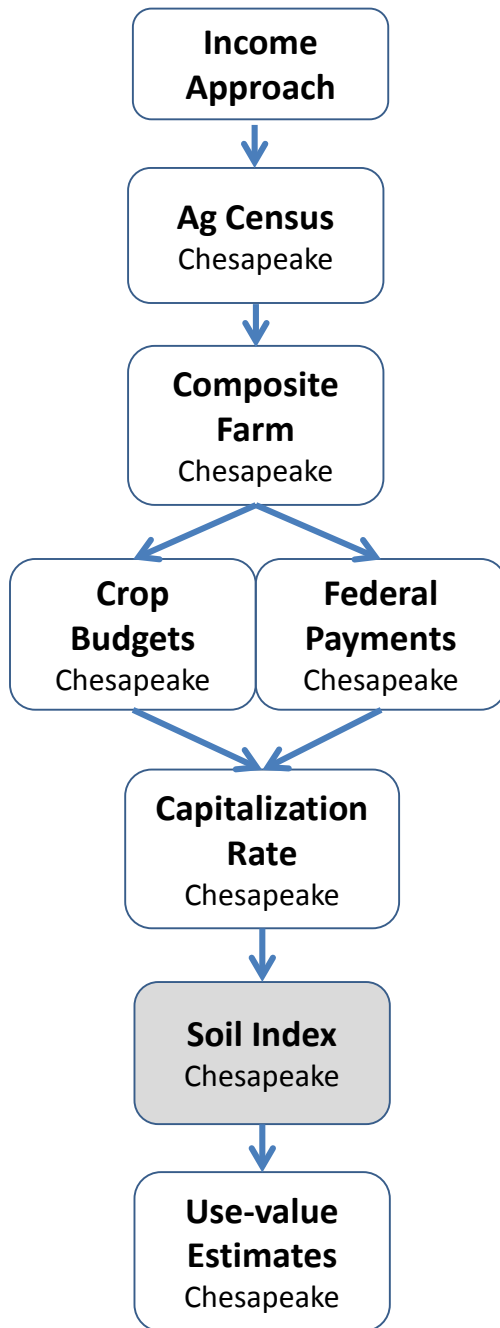

## USDA Land Classes for Ag use

Land Capability Classes	Productivity Index
Class I - Excellent cropland	1.50
Class II - Good cropland	1.35
<b>Class III - Average cropland</b>	<b>1.00</b>
Class IV - Below average cropland – strip cropping only, hay	0.80
Class V – Good Pasture, hay	0.60
Class VI – Pasture	0.50
Class VII – Very limiting - Pasture only	0.30
Class VIII – Not suitable to agriculture – steep or wet	0.10

# Indexing for Soil Productivity

## Chesapeake

Land Class	Reported Acreage	Productivity Index	Weighted Acreage
I	300	1.50	450.00
II	4,919	1.35	6,640.65
III	45,077	1.00	45,077.00
IV	10,498	0.80	8,398.40
Total	60,794		60,566.05
Soil Index Factor $60,566.05 \div 60,794 = 0.996$			

Virginia Beach = 1.202

Southampton = 1.273

Suffolk = 1.299

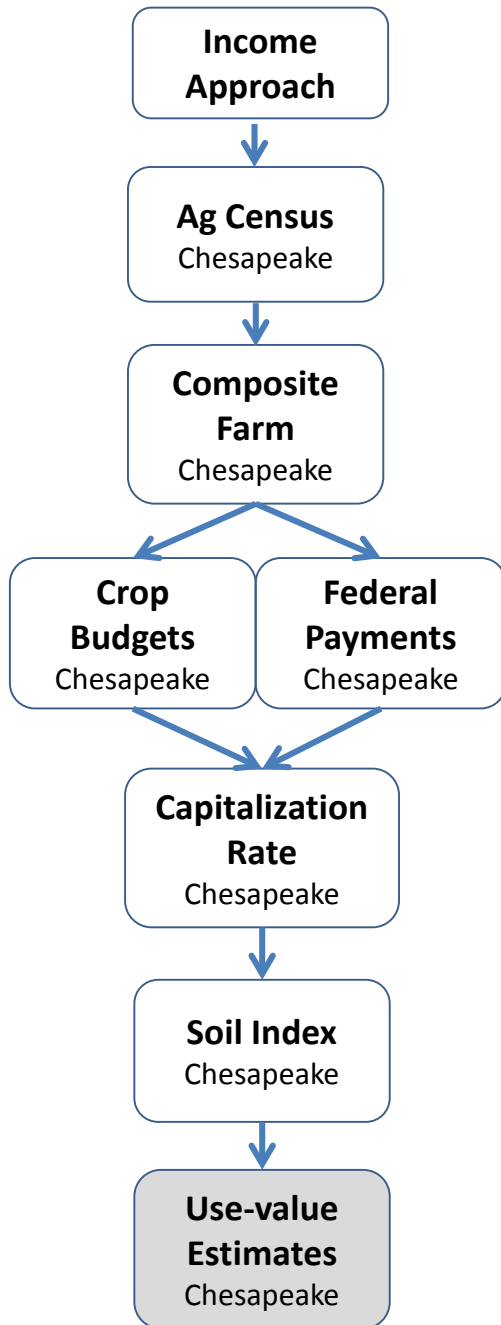

# Adjusting to Class III land

Why?

- Data reflects average soil productivity for each county
- Values are adjusted to reflect Class III productivity

## Use Value Chesapeake TY2016

	Use Value =	Use Value	÷	Soil index
	Without risk =	\$2,440.62	÷	0.996
	<b>Without Risk Class III =</b>			<b>\$2,450</b>
	With risk	\$2,324.40	÷	0.996
	<b>With Risk Class III =</b>			<b>\$2,330</b>

# Final Estimates Chesapeake TY2016

	Cropland				Weighted Cropland AVG	Pastureland			Weighted Pasture land AVG	Weighted Ag. Land AVG	VIII
	I	II	III	IV	I-IV	V	VI	VII	V-VII	I-VII	
<b>w/out Risk</b>	3,670	3,310	2,450	1,960	<b>2,440</b>	1,470	1,220	730	<b>730</b>	<b>2,390</b>	240
<b>w/ Risk</b>	3,500	3,250	2,330	1,870	<b>2,320</b>	1,400	1,170	700	<b>700</b>	<b>2,280</b>	230

- Note: Final estimated values are rounded to the nearest \$10
- The Class III estimate of \$2,449 is reported as \$2,450

# Rental Rate Approach Chesapeake TY2016

- Starting 2009 NASS published rental rate data annually for
  - Cropland
  - Irrigated cropland
  - Pasture land
- Chesapeake County rental rates for 2014 TY2016 (NASS)
  - Cropland = \$73
  - Pastureland = \$20.50

# Rental Rate Use Value Chesapeake TY2016

	<b>Rental Rate</b>	<b>÷</b>	<b>Cap Rate</b>	<b>=</b>	<b>Value</b>
<b>Cropland</b>	\$73	÷	0.0731	=	<b>\$880</b>
<b>Pasture</b>	\$20.50*	÷	0.0731	=	<b>\$280</b>

\*Southeastern District Pasture combined county

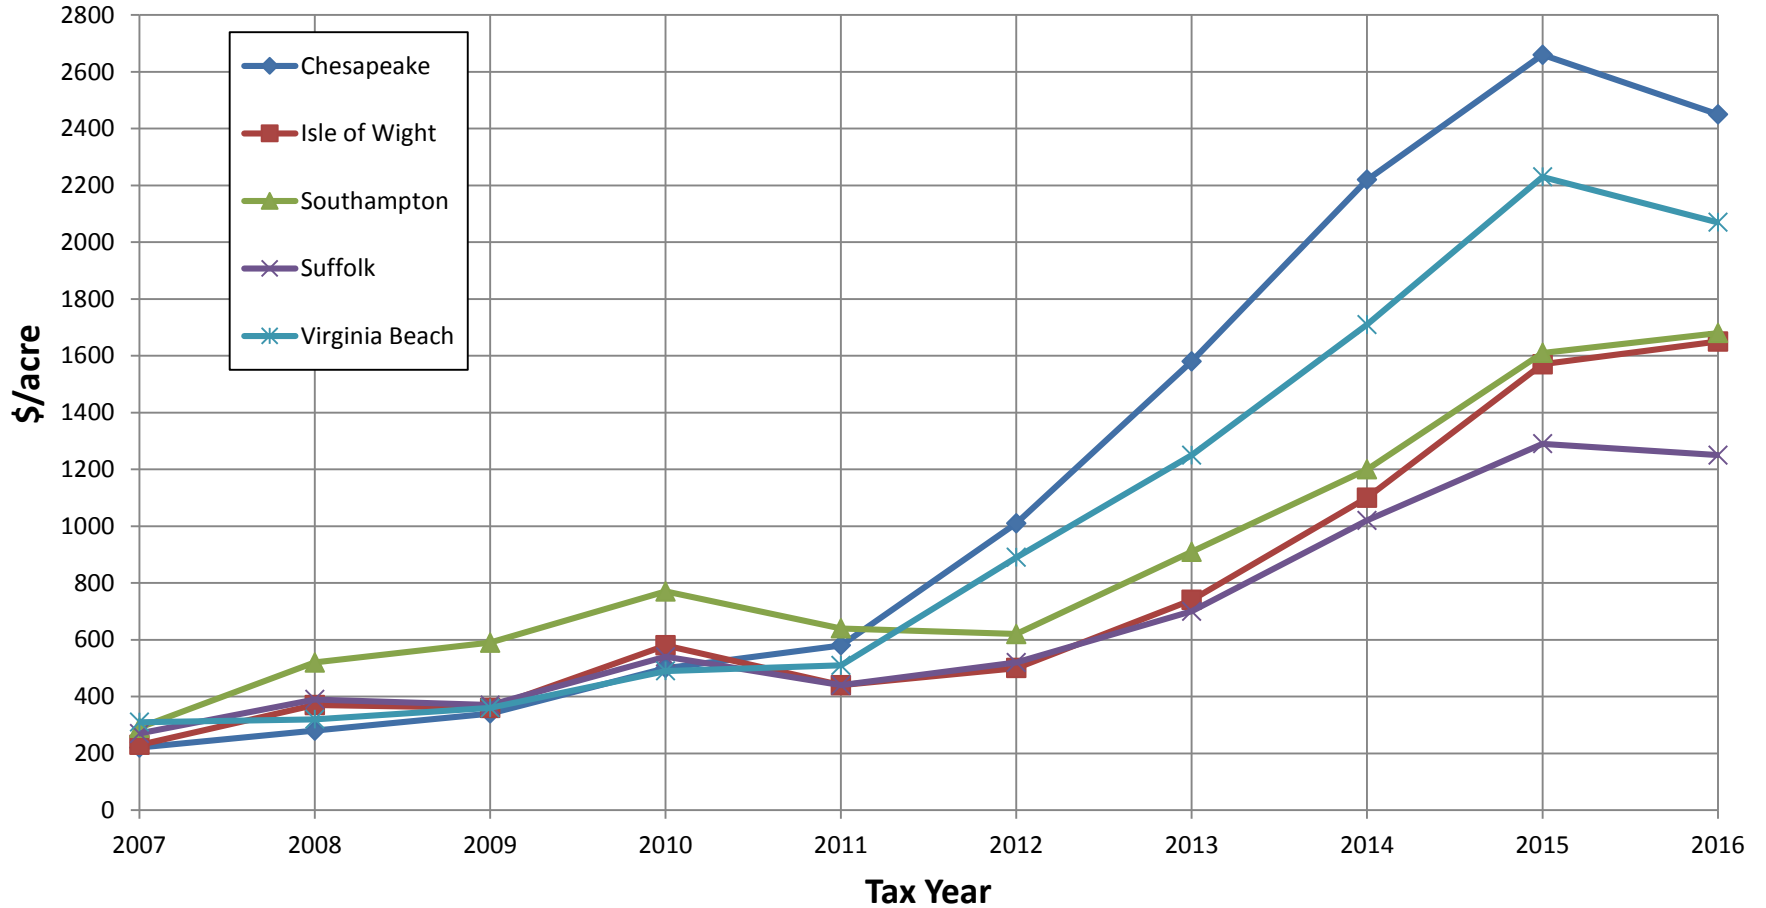

Rental Rate Estimates are published annually  
– **not averaged over time**

## Income Approach and Rental Rate Approach: Compared

Chesapeake	<b>Income Approach</b>		<b>Rental Rate Approach</b>	
<b>TY2016</b>	Cropland (I-IV AVG)	<b>\$2,440</b>	Cropland	<b>\$880</b>
	Pastureland (V-VII AVG)	<b>\$730</b>	Pastureland	<b>\$280</b>

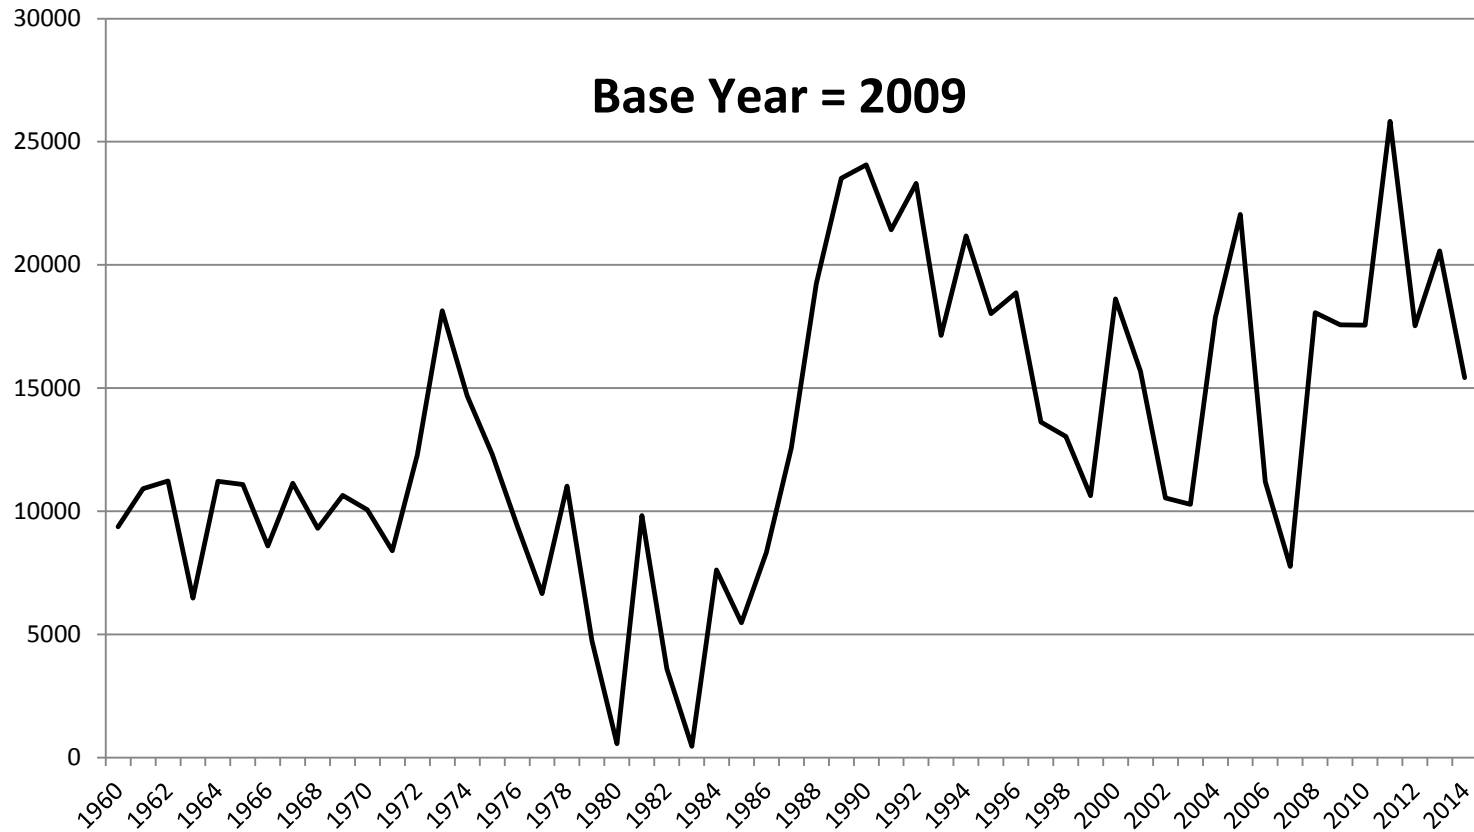

# Use-value Estimates: Type III Land (w/out risk)

## Selected Jurisdiction Comparison (Tax Years 2007 to 2016)

# Real Net Farm Income Virginia \$/farm

Source: USDA/ERS Farms and Land in Farms and USDA/ERS Farm Income and Wealth Statistics
