

Questions regarding any *statutorily* related issues surrounding use-value assessment should be directed to Jason Hughes at the Property Tax Unit, Virginia Department of Taxation. Questions regarding the *technical* aspects of the methodology used to produce the use-value estimates should be directed to Lex Bruce or Gordon Groover at the Department of Agricultural and Applied Economics, Virginia Tech.

Land Capability Classifications	
Class I	Soils have few limitations that restrict use.
Class II	Soils have moderate limitations that reduce the choice of plants or require moderate conservation practices.
Class III	Soils have severe limitations that reduce the choice of plants, require special conservation practices, or both.
Class IV	Soils have very severe limitations that restrict the choice of plants, require very careful management, or both.
Class V	Soils are subject to little or no erosion but have other limitations, impractical to remove, that limit their use largely to pasture, range, woodland, or wildlife food and cover.
Class VI	Soils have severe limitations that make them generally unsuited to cultivation and limit their use largely to pasture or range, woodland, or wildlife food and cover.
Class VII	Soils have very severe limitations that make them unsuited to cultivation and that restrict their use largely to grazing, woodland, or wildlife.
Class VIII	Soils and land forms have limitations that preclude their use for commercial plant production and restrict their use to recreation, wildlife, or water supply, or to aesthetic purposes

## TY2013 USE-VALUE ESTIMATES

**Table 1: Income Approach - Estimated use value of agricultural land in New Kent. (\$ / Acre)**

Land Class	Use Value Without Risk <sup>4</sup>	Use Value With Risk <sup>4</sup>
I	1280	1210
II	1150	1090
III	850	810
IV	680	650
<b>Avg. I – IV</b>	<b>1060</b>	<b>1000</b>
V	510	490
VI	430	400
VII	260	240
<b>Avg. V – VII</b>	<b>400</b>	<b>370</b>
<b>Avg. I – VII</b>	<b>1010</b>	<b>960</b>
VIII	90	80

<sup>4</sup> N.A. = not applicable

**Table 2: Income Approach - Estimated use value of orchards in New Kent. (\$ / Acre)**

Land Class	Use Value of Apple Orchard	Use Value of Other Orchard
I	810	870
II	570	640
III	270	350
IV	100	180
V	70	130
VI	80	120
VII	20	50
VIII	90	90

**Table 3: Rental Rate Approach<sup>5</sup> – Cropland and Pastureland values based on NASS capitalized rental rates in New Kent or district value. (\$ / Acre)**

Cropland	790 <sup>ec</sup>
Irrigated Cropland	---
Pastureland	420 <sup>ep</sup>

<sup>ec</sup> Eastern District (Cropland)

<sup>ep</sup> Eastern District (Pastureland)

## Use Value Taxation in Virginia<sup>1</sup>

Virginia law allows for *eligible* land in agricultural, horticultural, forest, or open space use to be taxed at the value in *use* (use value) of the land as opposed to its *market* value. The State Land Evaluation and Advisory Council (SLEAC) was created in 1973 with the mandate to estimate the use value of eligible land for each jurisdiction participating in the use-value taxation program. SLEAC contracts annually with the Department of Agricultural and Applied Economics at Virginia Tech to develop an objective methodology for estimating the use value of land in *agricultural and horticultural* uses. A technical advisory committee, comprised of professionals familiar with Virginia agriculture, was established in 1998 to provide guidance on the technical aspects of developing an appropriate methodology. The members of SLEAC have officially sanctioned the use value estimates reported in this brochure.

### Role of the SLEAC Estimates

Section 58.1–3229 of the *Code of Virginia* requires each participating jurisdiction’s assessment office to *consider* SLEAC estimates when assessing the use value of eligible land. However, the local assessing office is not required to use SLEAC estimates verbatim.

Under certain circumstances, adjustments to SLEAC estimates may be necessary to accurately reflect local conditions that affect the use values of eligible land parcels.

<sup>1</sup> Information about Virginia’s Use Value Assessment Program can be found at <http://usevalue.agecon.vt.edu/>

## TY2013 Use-value Estimates: Income and Rental Rate Approaches

Tables 1 & 2 list the estimated use values of agricultural and horticultural land using an **income approach**. These estimates are based on the capitalized net income that a *bona-fide* agricultural or horticultural enterprise located in the county could be expected to earn. These values are updated annually for public information. Note, the local assessing office can only make changes to assessed property values during a reassessment year.

Table 1 lists the estimated use value of land in *agricultural* use for each of the eight Soil Conservation Service land capability classifications. Because data on the land class composition of individual parcels is often unavailable, average use values have also been provided.<sup>2</sup> The average of land in classes I – IV represents the average use value of *cropland*. The average of land in classes V – VII represents the average use value of *pastureland*. The average of land in classes I –VII represents the average use value of *all agricultural land*.<sup>3</sup>

The *without risk* estimates apply to land that is not at risk of flooding. *The with risk estimates should only be applied to land parcels that are at risk of flooding due to poor drainage that cannot be remedied by tilling or drainage ditches.*

<sup>2</sup> Data limitations prohibited the computation of average use values in a few counties and in most independent cities and townships.

<sup>3</sup> Note. Class VIII land is not considered suitable for agricultural production and is therefore not included in this average.

Table 2 lists the estimated use value of land in orchard use. Values are reported for both apple orchards and “other” orchards for each of the eight Soil Conservation Service land capability classifications. “Other” orchard refers to peach, pear, cherry, or plum production. Data limitations prohibit the computation of average use values for orchards.

Table 3 lists the estimated use values of cropland and pastureland using a **rental rate approach**. These use-values are based on capitalized rental rates obtained annually from the USDA National Agricultural Statistical Service (NASS). If there are sufficient numbers of responses to meet the NASS nondisclosure requirements for a jurisdiction then the value is published. However, if there are not enough responses in a jurisdiction to meet non-disclosure requirements, then all the non-disclosed jurisdictions within a crop reporting district are summarized and published as a *Combined Counties (District) value*.
