

Questions regarding any *statutorily* related issues surrounding use-value assessment should be directed to Theresa Born at the Property Tax Unit, Virginia Department of Taxation. Questions regarding the *technical* aspects of the methodology for the agricultural or horticultural use-value estimates should be directed to Jennifer Friedel at the Department of Agricultural and Applied Economics, Virginia Tech. Questions about forest use-value estimates should be directed to Dean Cumbia at the Department of Forestry in Charlottesville. Questions about open space use-value estimates should be directed to Brian Fuller at the Department of Conservation and Recreation in Richmond.

Table 1: Income Approach – Estimated use value of agricultural land in **Madison** (\$ / Acre).

Land Classs	Use Value Without Risk	Use Value With Risk
<i>I</i>	1,100	1,050
<i>II</i>	990	940
<i>III</i>	730	700
<i>IV</i>	590	560
<i>Avg. I-IV</i>	790	750
<i>V</i>	440	420
<i>VI</i>	370	350
<i>VII</i>	220	210
<i>Avg. V-VII</i>	310	300
<i>Avg. I-VII</i>	740	700
<i>VIII</i>	70	70

Table 2: Income Approach – Estimated use value of orchards in **Madison** (\$ / Acre).

Land Classs	Use Value of Apple Orchard	Use Value of Other Orchard
<i>I</i>	780	780
<i>II</i>	590	590
<i>III</i>	330	330
<i>IV</i>	190	190
<i>V</i>	140	140
<i>VI</i>	130	130
<i>VII</i>	60	60
<i>VIII</i>	70	70

	Site Productivity(\$/acre)			
	<i>Fair</i>	<i>Good</i>	<i>Excellent</i>	<i>Non-Productive Land</i>
Mountain	183	272	298	100
Piedmont	272	396	430	100

Table 5: Open Space Recommended Values (\$/Acre) - Madison

<i>Golf Course</i>	<i>Swim and Racket Clubs</i>
1,000-1,500	3,000-4,000

N/A = not applicable to the county/city

Transfers <: Data used to estimate agricultural use values for a jurisdiction (counties/cities) may not be published or is insufficient. When this occurs, data from a nearby county is used. This process is referred to as transferring-in. Transferring-in is also used for jurisdictions with large areas of land lying in more than one physiographic region, for example coastal plain and piedmont. A transfer-in jurisdiction is noted by use of an arrow < after the name.

Estimated Use Values For Madison

Estimates apply to 2020

Use Value Taxation in Virginia¹

Virginia law allows for *eligible* land in agricultural, horticultural, forest, or open space use to be taxed at the value in *use* (use value) as opposed to its *market* value.² The State Land Evaluation and Advisory Council (SLEAC) was created in 1973 with the mandate to estimate the use value of eligible land for each jurisdiction participating in the use-value taxation program. SLEAC provides for the development of an objective methodology for estimating the use value of land in *agricultural, horticultural, forest, and open space* use. The members of SLEAC have officially sanctioned the use value estimates reported in this brochure.

Role of the SLEAC Estimates

Section 58.1–3229 (et seq.) of the *Code of Virginia* requires each participating jurisdiction's assessment office to *consider* SLEAC estimates when assessing the use value of eligible land. However, the local assessing office is not required to use SLEAC estimates verbatim.

Agricultural/Horticultural Estimates

Tables 1 & 2 list the estimated use values of agricultural and horticultural land using an **income approach**. These estimates are based on capitalized net income - from agricultural or horticultural enterprises in each participating county. These values are updated annually. Note, the local assessing office can only make changes to assessed property values during a reassessment year.

Table 1 lists the estimated use value of land in *agricultural* use for each of the eight USDA Natural Resources Conservation Service (NRCS) land capability classifications.

For explanation of soil classifications see Procedures Manual on the use value website <http://usevalue.agecon.vt.edu/>. Because data on the land class composition of individual parcels is often unavailable, average use values have also been provided.³ The average of land in classes I – IV represents the average use value of *cropland*. The average of land in classes V – VII represents the average use value of *pastureland*. The average of land in classes I – VII represents the average use value of *all agricultural land*.⁴

The *without risk* estimates apply to land that is not at risk of flooding. *The with risk estimates should only be applied to land parcels that are at risk of flooding due to poor drainage that cannot be remedied by tilling or drainage ditches.*

Table 2 lists the estimated use value of land in orchard use. Values are reported for both apple orchards and “other” orchards for each of the eight NRCS land capability classifications. “Other” orchard refers to peach, pear, cherry, or plum production. Table 3 lists the estimated use values of cropland and pastureland using a **rental rate approach**. These use-values are based on capitalized rental rates obtained annually from the USDA National Agricultural Statistical Service (NASS). If there are sufficient numbers of responses to meet the NASS nondisclosure requirements for a jurisdiction then the value is published. However, if there are not enough responses in a jurisdiction to meet non-disclosure

requirements, then all the non-disclosed jurisdictions within a crop reporting district are summarized and published as a *Combined Counties (District) value*.

Forest Estimates

Table 4 lists, when appropriate, the estimated use values for forest land. For information pertaining to Forest land use taxation see

<http://www.dof.virginia.gov/land/usetax/introduction.htm>

Open Space Estimates

Table 5 lists, when appropriate, the estimated use values recommended for open space land. A locality may have values for golf courses or swim and racket clubs.

Participating agencies:

- Virginia Department of Taxation
<http://www.tax.virginia.gov/>
- Virginia Department of Agricultural and Applied Economics
<http://www.aaec.vt.edu/>
- Virginia Department of Conservation and Recreation
<http://www.dcr.virginia.gov/>
- Virginia Department of Forestry

Virginia Tech • Virginia State University

www.ext.vt.edu

¹ Information about Virginia's Use Value Assessment Program can be found at <http://usevalue.agecon.vt.edu/>

² A locality may adopt any combination of the four types of use-value taxation.

³ Data limitations prohibited the computation of average use values in a few counties and in most independent cities and townships.

⁴ Note. Class VIII land is not considered suitable for agricultural production and is therefore not included in this average.

Virginia Cooperative Extension programs and employment are open to all, regardless of race, color, national origin, sex, religion, age, disability, political beliefs, sexual orientation, genetic information, marital family, or veteran status, or any other basis protected by law. An equal opportunity/affirmative action employer. Issued in furtherance of Cooperative Extension work, Virginia Polytechnic Institute and State University, Virginia State University, and the U.S. Department of Agriculture cooperating. Edwin J. Jones, Director, Virginia Cooperative Extension, Virginia Tech, Blacksburg; Jewel E. Hairston, Administrator, 1890 Extension Program, Virginia State, Petersburg.

Table 2: The composite farm and average net returns in Madison.

Annual net returns are determined through enterprise budgeting for crops that contributed one or more acres to the composite farm. The estimated net returns shown in the table below are "olympic" averages¹ for each crop in the composite farm for the proceeding 7 budget years. A budget year lags a given tax year by 2 years (e.g., tax year 2014 corresponds to the budget year 2012).

Additional information about these estimates can be found at Virginia's Use-Value Assessment Program website, <http://usevalue.agecon.vt.edu>.

Estimates apply to tax-year 2020.

Number of Farms: 533²

Commodity	Total Acreage ³	Composite Farm(Acres) ¹	Estimated Net Return (\$/acre)
Alfalfa	1,052	2	\$114.80
Barley	582	1	\$11.92
Cabbage	(D)	---	---
Corn ⁴	7,317	14	\$119.42
Cotton	---	---	---
Cucumbers	1	---	---
Hay ⁵	20,518	38	\$0.05
Lima Beans	(D)	---	---
Pasture	38,101	71	\$3.72
Peanuts	---	---	---
Potatoes	2	---	---
Pumpkins	(D)	---	---
Snap Beans	2	---	---
Sorghum	---	---	---
Soybeans	7,685	14	\$277.62
Sweet Corn	(D)	---	---
Tobacco	---	---	---
Tomatoes	(D)	---	---
Watermelons	1	---	---
Wheat	821	2	\$45.04
Double-Cropped ⁶	1,403	3	---
Total Cropland Harvested	74,679	139	
Net Return			\$44.39⁷

Notes

(D) = Withheld to avoid disclosing data of individual farms.

(Z) = Less than half of the unit shown.

— = Represents 0 or not reported/calculated.

¹In an olympic average, the highest and lowest are dropped prior to calculating the arithmetic mean.

²Data taken from the 2017 Census of Agriculture.

³Some data do not add exactly due to rounding and some categories are not listed due to disclosure rules.

⁴Corn acreage is corn-grain plus corn-silage acreages.

⁵Hay acreage is (all hay + all haylage, grass silage, greenchop) - (alfalfa hay + haylage or greenchop from alfalfa or alfalfa mixtures).

⁶Double-cropped acreage is subtracted from the crops listed in lines 2-9 to arrive at the total cropland harvest acreage. Weighted average of crop estimated net returns by composite farm acreage.

⁷Weighted average of crop estimated net returns by the composite farm acreage..

Transfers <: Data used to estimate agricultural use values for a jurisdiction (counties/cities) may not be published or is insufficient. When this occurs, data from a nearby county is used. This process is referred to as transferring-in. Transferring-in is also used for jurisdictions with large areas of land lying in more than one physiographic region, for example coastal plain and piedmont. A transfer-in jurisdiction is noted by use of an arrow < after the name.

Table 3: Worksheet for estimating the use value of agricultural land in Madison.

Additional information about these estimates can be found at Virginia's Use Value Assessment Program website, <http://usevalue.agecon.vt.edu>.

Estimates apply to tax-year 2020.

1. Estimated Net Return:	\$44.39
2. Capitalization Rates	
a. Interest Rate Component¹	0.0531
b. Property Tax Component²	0.0071

	IV	20,069	0.80	16,055.46
	V	175	0.60	104.75
	VI	4,065	0.50	2,032.57
	VII	2,820	0.30	845.86
	Total	67,520		67,974.33
	Soil Index Factor:⁷	1.01		

5. Agricultural Use Value Adjusted By Land Class

Class	Land Index	Without Risk	Reported⁸	With Risk	Reported⁸
I	1.50	\$1,098.87	\$1,100	\$1,046.54	\$1,050
II	1.35	\$988.98	\$990	\$941.89	\$940
III	1.00	\$732.58	\$730	\$697.69	\$700
IV	0.80	\$586.06	\$590	\$558.15	\$560
V	0.60	\$439.55	\$440	\$418.62	\$420
VI	0.50	\$366.29	\$370	\$348.85	\$350
VII	0.30	\$219.77	\$220	\$209.31	\$210
VIII	0.10	\$73.26	\$70	\$69.77	\$70

¹The 7-year average of the long-term interest rates charged by the various Agriculture Credit Associations serving the state.

²The 7-year average of the effective true tax rates reported by the Virginia Department of Taxation.

³Rate should only be used when the soil has poor drainage that is not remedied by tilling or drainage ditches or when the land lies in a floodplain.

⁴Estimated Net Return (Line 1) divided by Rate without risk (Line 2c).

⁵Estimated Net Return (Line 1) divided by Rate with risk (Line 2e).

⁶Data provided by National Resources Conservation Service, United States Department of Agriculture. <https://websoilsurvey.nrcs.usda.gov/>

⁷Index factor = (Total Weighted Acreage) / (Total Cropland Acreage).

⁸Rounded to the nearest \$10 and reported in Table 1a.

Transfers <: Data used to estimate agricultural use values for a jurisdiction (counties/cities) may not be published or is insufficient. When this occurs, data from a nearby county is used. This process is referred to as transferring-in. Transferring-in is also used for jurisdictions with large areas of land lying in more than one physiographic region, for example coastal plain and piedmont. A transfer-in jurisdiction is noted by use of an arrow < after the name.

Table 5: Worksheet for estimating the use value of orchard land in Madison.

The estimated net returns assume a planting density of 135 trees per acre. Additional information about these estimates can be found at Virginia's Use Value Assessment Program website, <http://usevalue.agecon.vt.edu/>. Estimates are applicable to tax-year **2020**

1. Estimated Net Returns (Loss) Per Acre

Age of Trees	Processed Fruit	Fresh Fruit
1-3 years	-\$3,303.34	-\$3,376.09
4-6 years	-\$668.73	\$574.61
7-15 years	-\$1,211.45	-\$1,729.29
16-20 years	-\$1,213.69	\$405.17
Discounted (20Yr Cycle)	-\$18,694.76	-\$17,191.66
Utilization of Sales (10Yr AVG %)	66%	34%
Apple Insurance (Annual AVG/acre)	\$775.95	

2. Weighted Average Net Return Values

a)	TY2020 ¹	-\$17,402.52
b)	TY2019	-\$18,617.27
c)	TY2018	-\$19,377.40
d)	TY2017	-\$18,616.25
e)	TY2016	-\$19,677.43
f)	TY2015	-\$3,403.09
g)	TY2014	-\$7,533.62

3. Net Returns

a) Net return to "trees and land" (Olympic average of 2a thru 2g) ²	\$0.00
b) Net return attributable to "land only" (Class III) ³	\$44.09
c) Net return attributable to "trees only"	-\$44.09

4. Capitalization Rate

a) Interest Rate ⁴	0.0531
b) Property Tax ⁵	0.0071
c) Depreciation of Apple Trees ⁶	0.0500
d) Depreciation of "Other" Trees ⁷	0.0500
e) Apple Orchard Capitalization Rate	0.1102
f) "Other" Orchard Capitalization Rate	0.1102

5. Use Value of Apple Orchard and "Other" Orchard

Class	Orchard Index ⁸	Apple Trees	Apple Trees and Land ⁹	Other Trees ⁹	Other Trees and Land ⁹
I	0.8	-\$320.12	\$778.75	-\$320.12	\$778.75
II	1.0	-\$400.14	\$588.84	-\$400.14	\$588.84
III	1.0	-\$400.14	\$332.43	-\$400.14	\$332.43
IV	1.0	-\$400.14	\$185.92	-\$400.14	\$185.92
V	0.8	-\$300.11	\$139.44	-\$300.11	\$139.44
VI	0.6	-\$240.09	\$126.20	-\$240.09	\$126.20
VII	0.4	-\$160.06	\$59.72	-\$160.06	\$59.72
VIII	0.0	\$0.00	\$73.26	\$0.00	\$73.26

¹Average net return of the eight orchard categories listed in Section 1 of this table. The weights are provided by the percent of total trees represented by each category.

²In an olympic average, the highest and lowest values are dropped prior to calculating the arithmetic mean.

³This is determined by dividing the unadjusted net return value (Table 3, Line 1) by the soil index factor (Table 3, Section 4).

⁴The 7-year average of long-term interest rates charged by the various Agriculture Credit Associations serving the state.

⁵The 7-year average of the effective true tax rates charged by the Virginia Department of Taxation.

⁶The depreciation rate applicable to apple trees assumes that trees are replaced on a 20-year rotation.

⁷"Other" trees refer to peach, cherry, pear, and plum trees. The depreciation rate applicable to "other" trees assumes that trees are replaced on a 20-year rotation.

⁸The orchard index is applicable only in determining the value of the trees. The land index (Table 3, Section 5) is applied to land.

⁹The use value of trees and land is determined by adding the appropriate without-risk land-use-value (Table 3, Section 5) to the use value of the trees.

Transfers <: Data used to estimate agricultural use values for a jurisdiction (counties/cities) may not be published or is insufficient. When this occurs, data from a nearby county is used. This process is referred to as transferring-in. Transferring-in is also used for jurisdictions with large areas of land lying in more than one physiographic region, for example coastal plain and piedmont. A transfer-in jurisdiction is noted by use of an arrow < after the name.
